Trexel Continues to Grow with the Appointment of a Business Development Manager

(Trexel, Inc., Wilmington, MA April 24, 2017)... Trexel is pleased to announce that Leo Devellian has joined the company as the Business Development Manager. Leo brings many years of relevant industry experience; he was most recently Key Account Manager at MoldMasters, a worldwide leader in hot runner systems for injection molding. He also spent 22 years in Technical Sales at Synventive Molding Solutions, also a leading hot runner system manufacturer.

In this new role, Leo will focus on the expansion of Trexel's MuCell technology beyond the automotive industry in North America as well as manage Trexel's TecoCell chemical foaming products globally. "We are excited for Leo to help Trexel elevate our approach to business development in a few highly promising growth markets for our technologies." said Brian Bechard, President and CEO.

Leo is located in the Wilmington headquarters and reports to Brian Bechard, President & CEO of Trexel.

About Trexel, Inc.

Trexel, Inc., headquartered in Wilmington, MA, has led the development of the MuCell® microcellular foaming injection molding technology and has pioneered many plastic

processing solutions. The MuCell® technology provides unique design flexibility and cost savings opportunities by allowing plastic part design with material wall thickness optimized for functionality and not for the injection molding process. The combination of density reduction and design for functionality often results in material and weight savings of more than 20%. The numerous cost and processing advantages have led to rapid global deployment of the MuCell® process in automotive, consumer electronics, medical, packaging and consumer goods applications. Process deployment as well as equipment is supported by teams of highly qualified engineers through Trexel subsidiaries in North America, Europe, and Asia.

Trexel recently extended its product offering with the TecoCell® system. TecoCell is a unique chemical foaming technology that provides uniform microcellular structure to injection-molded parts.
